GENE EXPRESSION

Postinduction Turnoff of Beta-Interferon Gene Expression. Lisa-Anne Whittemore and Tom Maniatis .......................................................... 1329–1337

A cDNA for a Human Cyclic AMP Response Element-Binding Protein Which Is Distinct from CREB and Expressed Preferentially in Brain. Catherine J. Kara, Hsiou-Chi Liou, Lionel B. Ivashkiv, and Laurie H. Glimcher .... 1347–1357

Ouabain-Resistant Mutants of the Rat Na,K-ATPase α2 Isoform Identified by Using an Episomal Expression Vector. Victor Canfield, Janet Retting Emanuel, Nancy Spickofsky, Robert Levenson, and Robert F. Margolskee 1367–1372

Ustilago maydis KP6 Killer Toxin: Structure, Expression in Saccharomyces cerevisiae, and Relationship to Other Cellular Toxins. Jianshi Tao, Idit Ginsberg, Nanditta Banerjee, W. Held, Yigal Koltin, and Jeremy A. Bruenn .......................................................... 1373–1381

Translocation of an Erythroid-Specific Hypersensitive Site in Deletion-Type Hereditary Persistence of Fetal Hemoglobin. James T. Elder, William C. Forrester, Craig Thompson, Dixie Mager, Paula Henthorn, Mary Peretz, Thalia Papayannopoulou, and Mark Groudine 1382–1389

Sequences Downstream of the Transcription Initiation Site Modulate the Activity of the Murine Dihydrofolate Reductase Promoter. Peggy J. Farnham and Anna L. Means .......................................................... 1390–1398

A Large Protein Containing Zinc Finger Domains Binds to Related Sequence Elements in the Enhancers of the Class I Major Histocompatibility Complex and Kappa Immunoglobulin Genes. Albert S. Baldwin, Jr., Kenneth P. LeClair, Harinder Singh, and Phillip A. Sharp .......................................................... 1406–1414

Transcription of a Yeast Phosphoglucomutase Isozyme Gene Is Galactose Inducible and Glucose Repressible. Dahlkyun Oh and James E. Hopper .......................................................... 1415–1422

Identification of Schizosaccharomyces pombe Transcription Factor PGA4, Which Binds Cooperatively to Saccharomyces cerevisiae GAL4-Binding Sites. Douglas M. Ruden .......................................................... 1432–1438

C-Ha-ras Down Regulates the α-Fetoprotein Gene but Not the Albumin Gene in Human Hepatoma Cells. Kazuhiko Nakao, Denise Lawless, Yoshihide Ohe, Yasuyoshi Miyao, Hidekazu Nakabayashi, Hiroyuki Kamiya, Kazunobu Miura, Eiko Ohtsuka, and Taiki Tamaoki 1461–1469

A Novel cis-Acting DNA Element Required for a High Level of Inducible Expression of the Rat P-450C Gene. Atsushi Yanagida, Kazuhiro Sogawa, Ken-ichi Yasumoto, and Yoshiaki Fujii-Kuriyama .......................................................... 1470–1475

Continued on following page
Sequence Requirements for Transcriptional Arrest in Exon 1 of the Murine Adenosine Deaminase Gene. Viraragovahan Ramamurthy, Ming-Chei Ma, Michael L. Harless, David A. Wright, and Rodney E. Kellems .......... 1484–1491

Autoinduction of Transforming Growth Factor β1 Is Mediated by the AP-1 Complex. Seong-Jin Kim, Peter Angel, Robert Lafyatis, Kazue Hattori, Kyung Young Kim, Michael B. Sporn, Michael Karin, and Anita B. Roberts ................................................................. 1492–1497

Regulation of Tumor Necrosis Factor Alpha Transcription in Macrophages: Involvement of Four κB-Like Motifs and of Constitutive and Inducible Forms of NF-κB. Martine A. Collart, P. Baeyerle, and P. Vassalli ................. 1498–1506

Oocyte-Specific Expression of Mouse Zp-2: Developmental Regulation of the Zona Pellucida Genes. Li-fang Liang, Steven M. Chamow, and Jurrien Dean ... 1507–1515

Two Distinct Xenopus Genes with Homology to MyoD1 Are Expressed before Somite Formation in Early Embryogenesis. Jon B. Scales, Eric N. Olson, and Michael Perry ................................................................. 1516–1524

Multilevel Regulation of Surface Antigen Gene Expression in Paramecium tetraurelia. David Gilley, Bertina M. Rudman, John R. Preer, Jr., and Barry Polisky ................................................................. 1538–1544

Structure, Hormonal Regulation, and Identification of the Interleukin-6- and Dexamethasone-Responsive Element of the Rat Haptoglobin Gene. Sanja Marinkovic and Heinz Baumann ................................................................. 1573–1583

mXBP/CRE-BP2 and c-Jun Form a Complex Which Binds to the Cyclic AMP, but Not to the 12-O-Tetradecanoylphorbol-13-Acetate, Response Element. Lionel B. Ivashkiv, Hsiou-Chi Liou, Catherine J. Kara, William W. Lamph, Inder M. Verma, and Laurie H. Glimcher ................................................................. 1609–1621

A Bacterial Amber Suppressor in Saccharomyces cerevisiae Is Selectively Recognized by a Bacterial Aminoacyl-tRNA Synthetase. Helen Edwards and Paul Schimmel ................................................................. 1633–1641

Two Members of the Mouse mdr Gene Family Confer Multidrug Resistance with Overlapping but Distinct Drug Specificities. Alain Devault and Philippe Gros ................................................................. 1652–1663

Structure and Expression of Germ Line Immunoglobulin Heavy-Chain c Transcripts: Interleukin-4 plus Lipopolysaccharide-Directed Switching to Ce. Paul Rothman, Yunn-Yi Chen, Stuart Lutzker, Suzanne C. Li, Valerie Stewart, Robert Coffman, and Frederick W. Alt. ................. 1672–1679

Continued on following page

Polyadenylation of mRNA: Minimal Substrates and a Requirement for the 2' Hydroxyl of the U in AAUAAA. Peter L. Wigley, Michael D. Sheets, David A. Zarkower, Mary E. Whitmer, and Marvin Wickens .......................... 1705–1713

Detection of an Immunoglobulin Switch Region-Specific DNA-Binding Protein in Mitogen-Stimulated Mouse Splenic B Cells. Robert A. Wuerffel, Asher T. Nathan, and Amy L. Kenter .................................. 1714–1718

Three Novel Brain Tropomyosin Isoforms Are Expressed from the Rat α-Tropomyosin Gene through the Use of Alternative Promoters and Alternative RNA Processing. James P. Lees-Miller, Leslie O. Goodwin, and David M. Helfman .................................................. 1729–1742

Identification of a Saccharomyces cerevisiae DNA-Binding Protein Involved in Transcriptional Regulation. Huaming Wang, Pamela R. Nicholson, and David J. Stillman ........................................... 1743–1753

trans-Spliced Caenorhabditis elegans mRNAs Retain Trimethylguanosine Caps. Ruey-Fen Liou and Thomas Blumenthal ........................................... 1764–1768

mRNAs That Mature through trans-Splicing in Caenorhabditis elegans Have a Trimethylguanosine Cap at Their 5' Termini. Kevin Van Doren and David Hirsh ........................................... 1769–1772

Diabetes Induced in Male Transgenic Mice by Expression of Human H-ras Oncoprotein in Pancreatic β Cells. Shimon Efrat, Norman Fleischer, and Douglas Hanahan ........................................... 1779–1783

Cooperativity of Sequence Elements Mediates Tissue Specificity of the Rat Insulin II Gene. Young-Ping Hlung, Yi-Zhong Gu, and Ming-Jer Tsai ........................................... 1784–1788

High-Frequency Disruption of the N-myc Gene in Embryonic Stem and Pre-B Cell Lines by Homologous Recombination. Jean Charron, Barbara A. Malynn, Elizabeth J. Robertson, Stephen P. Goff, and Frederick W. Alt ........................................... 1799–1804

The Simian Virus 40 Small-t Intron, Present in Many Common Expression Vectors, Leads to Aberrant Splicing. Manley T. F. Huang and Cornelia M. Gorman ........................................... 1805–1810

Sp1 Can Displace GHF-1 from Its Distal Binding Site and Stimulate Transcription from the Growth Hormone Gene Promoter. Frédéric P. Lemaigre, Dominique A. Lafontaine, Stéphane J. Courtois, Serge M. Durviaux, and Guy G. Rousseau ........................................... 1811–1814

brIA Requires Both Zinc Fingers To Induce Development. Thomas H. Adams, Holger Deising, and William E. Timberlake ........................................... 1815–1817

DNA Methylation and Demethylation Events during Meiotic Prophase in the Mouse Testis. Jacquetta M. Trasler, Laura E. Hake, Paula A. Johnson, Acacia A. Alcivar, Clarke F. Millette, and Norman B. Hecht ........................................... 1828–1834

Effects of Translocations on Transcription from PVT. E. Shtivelman and J. M. Bishop ........................................... 1835–1839
Continued from preceding page

CELL GROWTH AND DEVELOPMENT

The src Oncogene Can Regulate a Human Glucose Transporter Expressed in Chicken Embryo Fibroblasts. Martyn K. White and Michael J. Weber ........ 1301–1306
Site-Directed Mutagenesis of the SH2- and SH3-Coding Domains of c-src Produces Varied Phenotypes, Including Oncogenic Activation of p60c-src. Hisamari Hirai and Harold E. Varmus ......................... 1307–1318
The Product of the Saccharomyces cerevisiae Cell Cycle Gene DBF2 Has Homology with Protein Kinases and Is Periodically Expressed in the Cell Cycle. Leland H. Johnston, Susan L. Eberly, John W. Chapman, Hiroyuki Araki, and Akio Sugino .................................................. 1358–1366
Regulation of Expression of Growth Arrest-Specific Genes in Mouse Fibroblasts. Carmela Ciccarelli, Lennart Philipson, and Vincenzo Sorrentino ........ 1525–1529
Oncogene N-ras Mediates Selective Inhibition of c-fos Induction by Nerve Growth Factor and Basic Fibroblast Growth Factor in a PC12 Cell Line. Timothy M. Thomson, Steven H. Green, Robert J. Trotta, David E. Burstein, and Angel Pellicer ................................................................. 1556–1563
Transforming c-Ki-ras Mutation Is a Preneoplastic Event in Mouse Mammary Carcinogenesis Induced In Vitro by N-Methyl-N-Nitrosourea. Shigeki Miyamoto, Saraswati Sukumar, Raphael C. Guzman, Rebecca C. Osborn, and Satyabrata Nandi ................................................................. 1593–1599
Ligand-Induced Phosphorylation of the Colony-Stimulating Factor 1 Receptor Can Occur through an Intermolecular Reaction That Triggers Receptor Down Modulation. Masahiro Ohtsuka, Martine F. Roussel, Charles J. Sherr, and James R. Downing ......................................................... 1664–1671
Transforming ras Proteins Accelerate Hormone-Induced Maturation and Stimulate Cyclic AMP Phosphodiesterase in Xenopus Oocytes. Susan E. Sadler, James L. Maller, and Jackson B. Gibbs ........................................ 1689–1696

CELL AND ORGANELLE STRUCTURE AND ASSEMBLY

Citrate Synthase Encoded by the CIT2 Gene of Saccharomyces cerevisiae Is Peroxisomal. Alfred S. Lewin, Victoria Hines, and Gillian M. Small ...... 1399–1405

Continued on following page

CHROMOSOME STRUCTURE AND DYNAMICS

Multiple Origins of Replication in the Dihydrofolate Reductase Amplicons of a Methotrexate-Resistant Chinese Hamster Cell Line. Chi Ma, Tzeng-Horng Leu, and Joyce L. Hamlin ........................................................... 1338–1346

HPRI, a Novel Yeast Gene That Prevents Intrachromosomal Excision Recombination, Shows Carboxy-Terminal Homology to the Saccharomyces cerevisiae TOP1 Gene. Andrés Aguilera and Hannah L. Klein ................. 1439–1451

Conversion at Large Intergenic Regions of Mitochondrial DNA in Saccharomyces cerevisiae. P. J. Skelly and G. D. Clark-Walker ......................... 1530–1537

A Novel Fluorescence-Based System for Assaying and Separating Live Cells according to VDJ Recombinase Activity. George D. Yancopoulos, Garry P. Nolan, Roberta Pollock, Susan Prockop, Suzanne C. Li, Leonard A. Herzenberg, and Frederick W. Alt ....................................... 1697–1704

Date of Issue: 19 March 1990
