

We have restriction nucleases for any break you want to make

And you can **trust** restriction nucleases from P-L Biochemicals to make only the breaks you want. They are highly active enzymes that have been tested for suitability in recombinant DNA research, sequencing and structural mapping.

P-L Biochemicals has become the hallmark of **quality** for molecular biology enzymes. Chances are, you are already using our polynucleotide kinase, or RNA ligase. With our recently announced **major price reductions** you can now afford to use restriction nucleases of matching quality.

For a complete product list, with specifications and prices, write or call toll free 800/558-7110.

The world's two most widely used clinical laboratory manuals are now available in completely revised and updated new editions:

Manual of Clinical Microbiology, 3RD EDITION

Manual of Clinical Immunology, 2ND EDITION

Manual of Clinical Microbiology, 3rd Edition

Editors: Edwin H. Lennette, Albert Balows, William J. Hausler, Jr., Joseph P. Tenover
July 1980, 1,047 pages, fully illustrated, available in two bindings:
Clothbound (ISBN: 0-914826-24-7), \$25.00; (ASM Members: \$18.00)
Flexible binding (ISBN: 0-914826-26-3), \$21.00; (ASM Members: \$15.00)

Manual of Clinical Immunology, 2nd Edition

Editors: Noel R. Rose and Herman Friedman
July 1980, 1,105 pages, fully illustrated, available in two bindings:
Clothbound (ISBN: 0-914826-25-5), \$25.00; (ASM Members: \$18.00)
Flexible binding (ISBN: 0-914826-27-1), \$21.00; (ASM Members: \$15.00)

Please note that members of the Society must remit payment with order, and that books sold to ASM members are for personal use only. Orders from overseas must be prepaid.

Now available as a clothbound book—

APPROVED LISTS OF BACTERIAL NAMES

Edited by V. B. D. Skerman, Vicki McGowan, and P. H. A. Sneath
on behalf of the Ad Hoc Committee of the Judicial Commission of the
International Committee on Systematic Bacteriology,
International Association of Microbiological Societies

Reprinted from the January 1980 issue of *International Journal of Systematic Bacteriology*

- Indispensable for the proper conduct of taxonomic studies and for the correct usage of bacterial names
- The culmination of 227 years of bacteriological nomenclature
- Complements the new starting date for bacteriological nomenclature—
1 January 1980
- The combined efforts of international taxonomic subcommittees and expert individual taxonomists

Approved Lists is an essential reference. It eliminates the need to search the world's literature simply for the sake of finding the first available name for an organism. In the past, strict observance of the rule of priority frequently resulted in the exhumation of a name never used after its initial proposal.

By contrast, the *Approved Lists* permits the scientist to ascertain rapidly and easily whether an isolate is a member of a new species. The procedure now is to compare

the isolate with the type (or neotype) strains and the description of the species which closely resembles it and which are included either in the *Approved Lists* or in *International Journal of Systematic Bacteriology*, starting with the January 1980 issue.

Reference to the *Approved Lists* is absolutely essential for the proper conduct of taxonomic studies and for the correct usage of the names of bacteria.

1980. 200 pages. Clothbound. \$10.00.
