Napco® announces:  
the years-ahead incubator system 
that won't be matched.

The new Napco water 
jacketed 6000 series 
embodies more important 
benefits and features than 
any incubator ever 
marketed.

Here are some of 
over 15 advances in 
incubator design.

More accurate 
control of chamber 
temperature. 
By positioning sensors not only in 
the water jacket, but also in the 
chamber itself, Napco permits 
more precise chamber 
monitoring than other water 
jacketed incubators.

New electronic 
controls, digital display. 
New solid state control 
system reduces chamber 
variances, and scanning digital 
displays monitor chamber 
parameters.

The first modular design. 
All control 
elements can 
be unplugged from 
the chamber module for 
quick service.

Unique wet-jet 
air flow system. 
The exclusive wet-jet air flow 
system provides maximum 
chamber uniformity and assures 
the highest relative humidity 
available in any incubator.

5. More secure 
chamber uniformity. 
Superior new 
Napco door 
closure systems ensure integrity of 
inner chamber.

6. The only water 
jacketed CO₂ incubator 
you can get really clean. 
Shelf standards and plenums can 
be easily removed 
for cleaning in five minutes. 
This leaves an 
empty, perfectly 
smooth chamber that can be 
swabbed for easy management 
of spores and contaminating 
organisms.

7. The best service 
in the industry. 
If you should ever have an 
equipment breakdown, a 
Heinicke-Napco Minute Man will 
be on his way to you in 48 hours. 
You'll seldom need the Minute Man service because Heinicke 
and Napco instruments are built 
to work. But if you do, dial 
toll free 800-327-9783.

Introducing a 
new constant flow 
incubator— the 4000 series. 
The new modular Napco 
constant flow system embodies 
a unique principle that offers 
superior results in tissue culture 
and related disciplines. Each of 
the modular chambers has its 
own individual controls and 
separate metering system, to 
accommodate specific 
environments in each module.

Available at the following dealers: 
Curtin-Matheson, Fisher Scientific Co., 
Preiser, Sargent-Welch, S.G.A. Scientific, 
Scientific Products, Arthur H. Thomas Co., 
in Canada: Canlab, Fisher Scientific Co. Ltd., Sargent-Welch of Canada Ltd.

All Napco 
water-jacket incubators 
are available in three 
space saving models.
Now available in a completely revised second edition —

MANUAL OF CLINICAL IMMUNOLOGY

Editors: Noel R. Rose and Herman Friedman

MCI2 will be completely unsurpassed as a source of information for clinical laboratory immunology, dealing as it does with the applications of immunology to the detection and analysis of a wide variety of diseases, including, but not limited to those induced by microorganisms. The best methods for conducting specific immunological tests are painstakingly and thoroughly detailed. The clinical interpretations of each procedure are discussed, as are pitfalls and problems that may be encountered in carrying out specific laboratory procedures.

Specifically, the second edition differs from the first in that a new initial section has been added dealing with general methods for precipitin reactions, cytolytic reactions, neutralization, immunofluorescence, enzyme-linked techniques, and lymphocyte characterization. The second section includes procedures for detection of immunogenetic markers on immunoglobulins. A new section dealing with complement and immune complexes has been added. The section on cellular components of immunological responses has been rewritten and expanded to include many of the newer methodologies being developed for cellular immune reactions. In addition, all the work embodied in this definitive book reflects the accelerated development of new and improved methods for clinical laboratory immunology since 1976, when the first, widely acclaimed edition was published.

Ordering Information:
MANUAL OF CLINICAL IMMUNOLOGY,
2nd Edition,
is available in two bindings: Clothbound
(ISBN: 0-914826-25-5); $25.00 ($18.00 to ASM Members)

Flexible binding
(ISBN: 0-914826-27-1); $21.00 ($15.00 to ASM Members)

Please note that members of the Society must remit payment with order, and that books sold to ASM members are for personal use only. Orders from overseas must be prepaid.

Washington, DC 20006

This new Manual covers all the taxa of bacteria, and its approach is generalized for both pure and applied bacteriology. Aimed at senior undergraduate and beginning graduate science majors, at teachers and researchers, the Manual provides practical descriptions of laboratory procedures that are known to be reliable and that are in frequent use. It will be an invaluable tool for all involved in bacteriology work in the laboratory setting.

The book comprises six sections, each of which is self-contained, with its own table of contents to help the reader find specific methods as easily as possible. The contents are listed below.

METHODOLOGY FOR GENERAL BACTERIOLOGY

GROWTH—Biophysical Factors in Growth—Biochemical Factors in Growth—Enrichment and Isolation—Solid Culture—Liquid Culture—Growth Measurement—Preservation

GENETICS—Gene Mutation—Gene Transfer—Plasmids

METABOLISM—Physical Methods—Chemical Composition—Enzymatic Activity—Permeability and Transport

SYSTEMATICS—General Characterization—Numerical Taxonomy—Genetic Characterization

LABORATORY SAFETY—Sterilization—Containment and Disinfection

ADDENDUM—Diluents and Biomass Measurement

ORDERING INFORMATION

Publication date: March 1981. 525 pages, fully illustrated.

Clothbound: Flexible binding:
$25.00 ($18.00 to Members of ASM) $21.00 ($15.00 to Members of ASM)

The "any time" reagents

Protein A from Pharmacia Fine Chemicals is the purified IgG-binding protein from an antibiotic-resistant strain of *Staphylococcus aureus*. It has become the preferred "second antibody" reagent for localising and quantitating antigens and antibodies because it:

- gives high assay sensitivity
  lower background adsorption than with conventional second antibodies due to freedom from interference by Fc receptors
- improves test reproducibility
  good storage stability allows the same reagent to be used throughout a series of tests
- reacts with IgG from many species
  allows one standard reagent to be used with a variety of antisera in several different assay systems
- is easy to label
  with $^{125}$I, peroxidase, ferritin etc.

Protein A, FITC-Protein A and Protein A-Sepharose CL-4B from Pharmacia Fine Chemicals are high-quality reagents whose uses are documented in more than 100 scientific papers in the immunology and cell biology literature.

Now's the time to get Protein A working for you — contact us today.
