DNA Repair Protein Involved in Heart and Blood Development

Yi Wang, Craig C. Shupenko, Luisa F. Melo, and Phyllis R. Strauss

Department of Biology, Northeastern University, Boston, Massachusetts 02115

Volume 26, no. 23, p. 9083–9093, 2006. As stated in Materials and Methods, the volume of reagents microinjected into embryos in knockdown and rescue experiments varied between 1 and 3 nl. However, it is important to note that the amounts of microinjected morpholino oligonucleotides or RNA provided throughout the paper were calculated with the assumption that a volume of 3 nl was injected in each case.
