

The newest addition to the annual
MICROBIOLOGY series,

MICROBIOLOGY-

1982

puts into focus
exciting new work in
the following major areas of microbiological research:

CELL-CELL INTERACTIONS IN PATHOGENESIS

Bacterial Adhesion in Pathogenesis

- Introduction
- Autochthonous Populations
- Role of Surface Proteins Involved in Surface Adhesion
- Role of Surface Polysaccharides in Bacterial Adhesion
- Variable Surface Factors in Bacterial Adhesion

The Macrophage in Host Defense

Cell Surface Receptors Involved in the Immune System

COMPARATIVE MOLECULAR BIOLOGY

Streptococcal Genetics

- Conjugation
- Transformation, Transduction, and Bacteriophage
- Drug Resistance
- Genetics and Physiology
- Metabolic and Bacteriocin-Related Plasmids
- Development and Use of Recombinant DNA Technology

Bacillus subtilis Chromosome

- Structure and Modification
- Molecular Cloning

As usual in this well-established series, these extended abstracts are carefully selected for their importance to the development of the knowledge base in each of these areas. The book will be particularly useful in research laboratories and institutional libraries.

Bibliographic and Ordering Information

Editor: David Schlessinger.

July 1982, 420 pages, clothbound. \$15.00 to ASM members; \$25.00 to others. Please note that ASM members must remit payment with order. Orders from outside the United States and Canada must be prepaid before shipment. Prices are subject to change without notice. ISBN: 0-914826-42-5. Standing orders to the series are welcome.

Previous volumes in the series, which started publication in 1975 with the volume entitled *Microbiology — 1974*, are still available in limited quantities. Prices for each preceding volume are \$15.00 for ASM members and \$25.00 for others.

An event that the scientific world welcomes:
Publication of

Current Chemotherapy and Immunotherapy

EDITORS: Piero Periti and Giuliana Gialdroni Grassi
PUBLISHER: American Society for Microbiology

Proceedings of the 12th International Congress of Chemotherapy

CURRENT CHEMOTHERAPY AND IMMUNOTHERAPY marks the outcome of the 12th ICC, a scientific meeting which is characterized by the excitement of new ideas and the presence of leading scientists from around the world. The two-volume book is remarkable, not only because it captures so vividly, by using extended abstracts, the essential content of the scientific information exchanged in Florence, but also because of the rapidity with which the material has been made available to scientists not fortunate enough to attend the meeting.

This compendium of information covers antimicrobial, anticancer, and antiviral chemotherapy, as well as immunology

and immunotherapy. Papers are divided into the following sections:

- Antimicrobial Agents
- Antiviral Agents
- Interferon
- Immunology
- Anticancer Chemotherapy

The two-volume set of meticulously edited, fully indexed books should be in every library with collections in chemotherapy, pharmacology, pharmaceutical sciences, cancer research, immunology, immunotherapy, antimicrobial agents, and medical microbiology. In addition, individual scientists whose work requires up-to-date knowledge of recent developments in current chemotherapy and immunotherapy will find this publication invaluable.

ORDERING INFORMATION

July 1982. 1,606 pages, in two clothbound volumes, sold only as a set. ISBN: 0-914826-39-5. \$95.00 (\$55.00 to members of the American Society for Microbiology, who must remit with order). Please note that all orders from outside the United States must be prepaid in US dollars. Prices are subject to change without notice.

State-of-the-art technology in clinical microbiology

RAPID METHODS and AUTOMATION in Microbiology

EDITOR: Richard C. Tilton

This new collection of research papers on a topic of increasing and critical interest promises to be of real assistance to clinical microbiologists, clinical pathologists, immunologists, medical technologists, and others who are caught up in the rapidly changing environment of microbiology. The speed of publication lends added utility to this survey of technologically advanced—and advancing—methods and procedures. The book, indeed, captures some of the excitement that was in the air at the meeting in May 1981 on which this volume is based: the Third International Symposium on Rapid Methods and Automation in Microbiology.

As the keynote seminar of the symposium suggested, topics of particular concern include systems approaches, evaluation, and the future of diagnostic systems in microbiology. The book fully develops the following areas:

- Computer Systems in Clinical Microbiology
- Rapid Detection of Microorganisms in Body Fluids
- Hydrophobic Grid-Membrane Microbiology
- Rapid Reporting in Microbiology
- Immunological Diagnosis of Infectious Diseases
- Chromatographic Analysis: a New Future for Clinical Microbiology
- Rapid Detection of Microorganisms in Urine
- Rapid Methods in Food Microbiology
- Systems Approaches to Diagnostic Microbiology
- Rapid Identification of Viral, Chlamydial, and Mycoplasmal Agents
- Rapid Identification of Clinically Important Anaerobes
- Applications of the Autobac System
- Clinical and Research Applications of the MS-2 System
- Nonautomated Rapid Methods in Microbiology

ORDERING INFORMATION:

February 1982. 361 pages. Clothbound. \$33.00. ISBN: 0-914826-38-7

Price subject to change without notice.
