Announcing
a major new emphasis and
broadening of the scope of

Journal of Virology
to include the expanding
and important area of

VIRAL PATHOGENESIS AND
IMMUNITY

A major change to the Journal of Virology is being implemented. Starting in January 1984, JVI will publish a major new section on viral pathogenesis and immunity. To help accomplish this change, two new editors of JVI have been appointed. They are Bernard N. Fields and Michael B. A. Oldstone. Edward M. Scolnick continues as Editor in Chief.

Scope Statement for New Section
The major scope of this new section will be the interaction of viruses with eucaryotic organisms. Among the fields that will be appropriate for publication in the new section are those aspects of virology that include experimental viral pathogenesis (including entry into the host, spread within the host, tropism to target tissues, and cellular injury) as well as the nature of the immune response (nonspecific and specific; cellular and humoral). In addition, such related areas as the nature of the viral receptors on host cells, determinants of tissue pathology, genetics of the host related to viral infections, and the physiology of the host as altered by viral infection will be included.

Submission of Manuscripts
Manuscripts should be submitted to: ASM Publications Office, 1913 I Street, NW, Washington, DC 20006, USA.

Subscriptions
Journal of Virology is published monthly, approximately 4,500 printed pages a year. Members of ASM may subscribe for $37.00 per year (U.S.); $49.00 (foreign). The nonmember subscription rate is $249.00. All payments must be made in advance of subscription service and must be in U.S. dollars, drawn on a U.S. bank located within the continental United States. Price is subject to change.
This volume covers a variety of topics:

I. Termination, Antitermination, and Processing of Bacterial mRNA
II. Genetic Control of DNA Replication of Phages and Their Hosts
III. Impact of Genetics on the Systematics of Microorganisms
IV. Metabolism of C1 Compounds
V. Developmental Biology of Bacteria
VI. Mycology
VII. Infectious Diseases
   A. Iron and Trace Metals: Transport, Metabolism, and Disease
   B. Obligate Intracellular Parasitism
VIII. Short Reviews

Researchers in these areas, departmental and university libraries, and graduate students with a particular interest in any of these topics will find this volume useful.
Concentrate 200 Samples without BUMPING and achieve 100% sample recovery

Most laboratories report to us that they never realized how much sample they were losing until they used “Speed Vac”... The ease of sample preparation is also a big advantage... Place your samples in individual tubes or vials and turn “Speed Vac” “ON”... No cross contamination, no losses, no creeping, no foaming and the samples will be concentrated at the bottom of the tube...

How else can you concentrate “1 or 200” samples with such ease and efficiency.

- HPLC sample preparation where a dried, concentrated sample is important.
- GLC sample preparation... as above.
- PHOSPHOLIPID separation by HPLC — total evaporation of Acetonitrile — Water Solvent.
- INTERFERON purification by dialysis and evaporation.
- TRI-CYCLIC anti-depressant drug blood levels measured after a series of extractions and evaporations to dryness.
- HORMONE and Enzyme assays.

Pharmacia P-L Biochemicals

1984 PRODUCT REFERENCE GUIDE
excellence in biochemistry

Quality biochemicals for quality research.

Actually, the Pharmacia P-L Biochemicals Product Reference Guide lists over 2000 products for biochemistry and molecular biology. The products range from restriction nucleases to coenzymes, from lipids to polynucleotides — but our most important product is the quality that goes into each biochemical that we make.

At Pharmacia P-L Biochemicals, we take our commitment to "excellence in biochemistry" seriously. We make our biochemicals with quality — we know no other way.

The 1984 Product Reference Guide from Pharmacia P-L Biochemicals
