COVER IMAGE

Cover photograph: (Top) Male germ cells from *Xkr8*<sup>+/-</sup> (left) or *Xkr8*<sup>-/-</sup> (right) mice were treated with an apoptosis inducer (ABT737), stained with annexin V for phosphatidylserine (green) and propidium iodide (red), and observed by a confocal microscope. (Bottom) A testicular tube of *Xkr8*<sup>+/-</sup> (left) or *Xkr8*<sup>-/-</sup> (right) mice was stained with antivimentin (green) and anti-WT1 (red) for Sertoli cells, followed by staining with DAPI (4',6-diamidino-2-phenylindole; blue), and observed by a fluorescence microscope.
