

Books and journals exploring the latest developments in molecular and cellular biology . . .

CELL MOTILITY AND THE CYTOSKELETON

Volumes 12-14, 1989, Twelve Issues
B.R. Brinkley, Editor-in-Chief

CELL MOTILITY AND THE CYTOSKELETON has become a major forum for reporting all aspects of cell motility and its relationship to the cytoskeleton. This publication provides its readers with an easily accessible source for the latest developments in the field.

Highest priority is given to papers combining more than one of the following approaches: dynamic morphology, ultrastructure, biochemistry, biophysics, and genetic and molecular biological analysis. Theoretical and mathematical papers are encouraged if based upon, and consistent with, realistic data in the literature.

SPECIAL ISSUE: Volume 10, Number 1/2, 1988

Optical Approaches to the Dynamics of Cellular Motility

Lionel I. Rebhun, D. Lansing Taylor, and
John S. Condeelis, Guest Editors

Optical Approaches to the Dynamics of Cellular Motility is a special issue organized in connection with a Woods Hole Marine Biological Laboratory Symposium honoring Robert Day Allen for his outstanding contributions to the study of cell motility. This broad-ranging issue features coverage on all aspects of motile processes and phenomena using computer-aided techniques, including analytic techniques in light microscopy, amoebid movement and cytoplasmic streaming, mitosis, microtubule dynamics, and axoplasmic transport. This special issue is available for \$69.50 or as part of the 1988 subscription.

HIGHLIGHTS OF 1989 SUBSCRIPTION Special Issue • Molecular Genetic Approaches to Protein Structure and Function *In Vitro* and *In Vivo*

Edited by James A. Spudich

A collection of timely articles illustrating molecular genetic approaches and organisms amenable to genetic manipulations, now being used to study the structure and function of proteins involved in cell motility and the cytoskeleton.

Videotape Supplement • Cellular Motile Processes: Molecules and Mechanisms

Coordinated by Joseph W. Sanger and Jean M. Sanger

This first videotape supplement, scheduled for 1989, will provide data on cellular movement and cytoskeletal structure obtained by various electronic imaging methods. The supplement, accompanied by a viewing/teaching guide, will be included in the 1989 institutional rate subscription (available at \$30.00 to personal rate subscribers).

SUBSCRIPTION RATES: Volumes 9-11, 1988: Twelve Issues: Institutional, \$405.00, U.S.; \$444.00, elsewhere. Personal, \$95.00, U.S.; \$134.00, elsewhere. Volumes 12-14, 1989, Twelve Issues, including videotape supplement: Institutional, \$435.00, U.S.; \$490.00, elsewhere. Personal, \$95.00, U.S.; \$143.00, elsewhere (videotape additional). Subscriptions at the personal rate are available to those individuals whose institutions subscribe at the full rate. Special Issue: Volume 10, Number 1/2, 1988, *Optical Approaches to the Dynamics of Cellular Motility*, \$69.50, U.S.; \$79.50, elsewhere. Videotape Supplement, 1989, *Cellular Motile Processes: Molecules and Mechanisms*, \$30.00, U.S.; \$37.00 elsewhere.

Cell Movement, Volume 1: The Dynein ATPases

Fred D. Warner, Peter Satir, and Ian R. Gibbons,
Editors

Cell Movement, Volume 1: The Dynein ATPases is the first volume in *Cell Movement*, a treatise examining the molecular biochemistry and functional expression of three groups of energy-transducing enzymes. Understanding of the structure and function of these enzymes has grown significantly, partly as a result of the use of low temperature methods in electron microscopy and partly through the combination of molecular techniques and more traditional biochemical methods.

ISBN 0-8451-4266-6 • LC 88-23027 • Publication: 1988 • 356 pages,
price not set

Cell Movement, Volume 2: Kinesin, Dynein, and Microtubule Dynamics

Fred D. Warner and J. Richard McIntosh, Editors

The second volume in *Cell Movement*, *Kinesin, Dynein, and Microtubule Dynamics*, covers a broad range of subjects. Focused upon the characterization of two very different enzymes, kinesin and cytoplasmic dynein, this compilation also encompasses microtubule structure, organelles that govern the initiation of microtubule assembly, and illustrative examples of microtubule-mediated motility wherein the absolute identity of the relevant force-coupled enzymes is not yet known.

ISBN 0-8451-4267-4 • LC 88-23027 • Publication: 1988 • 420 pages,
price not set

Signal Transduction in Cytoplasmic Organization and Cell Motility

Peter Satir, John S. Condeelis, and Elias Lazarides, Editors

The last few years have seen remarkable progress in the fields of cell motility and signal transduction, making it evident that the two systems are intimately interconnected in a biochemical and functional sense. *Signal Transduction in Cytoplasmic Organization and Cell Motility* explores the growing evidence that the interactions between the signal-generating molecules, the signals themselves, and the cytomatrix are more subtle, deeper, and perhaps more significant than has previously been recognized. This timely volume is conveniently divided into four comprehensive sections, thoroughly exploring such areas as assembly of the cytomatrix, mechanisms of transmembrane signal transduction, signal transduction during motile events, and integration of signalling and force transduction.

UCLA Symposia on Molecular and Cellular Biology, New Series, Volume 77 • *Proceedings of a UCLA Symposium Held at Lake Tahoe, California, February 15-20, 1987* • ISBN 0-8451-2676-8 • LC 88-9172 • September • 414 pages • Book #2676 • Size: 7 × 10 • \$156.00

Molecular and Cellular Biology of Diabetes Mellitus, Volumes I-III

Boris Draznin, M.D., Ph.D., Shlomo Melmed, M.D., and Derek LeRoith, M.D., Ph.D., Editors

A comprehensive three-volume treatise, *Molecular and Cellular Biology of Diabetes Mellitus* provides a state-of-the-art assessment of this rapidly changing field. Written by leading scientists, the three volumes cover in detail the areas of insulin synthesis and secretion, insulin action at the level of the cell, and complications of diabetes mellitus, summarizing knowledge of the subject and suggesting future directions for basic research and clinical investigation.

Three Volume Set ISBN 0-8451-4297-6 • LC 88-23111 • Publication: November 1988 • Volume I: ISBN 0-8451-4257-7, 182 pages, \$53.00 • Volume II: ISBN 0-8451-4258-5, 242 pages, \$53.00 • Volume III: ISBN 0-8451-4259-3, 154 pages, \$53.00

Pigment Cell Research

Volume 2, 1989 • Six Issues

Joseph T. Bagnara, Editor-in-Chief

Sponsored by the European Society for Pigment Cell Research, the International Pigment Cell Society, and the Japanese Society for Pigment Cell Research

The interdisciplinary nature of pigment cell research makes scientists dependent on new perspectives offered to one another through publication in a specialized forum. PIGMENT CELL RESEARCH assures prompt dissemination of information from the following subdisciplines of pigment cell biology: cell biology including ultrastructure, organellogenesis, intracellular movements, and melanogenesis; developmental biology including determination, differentiation, transformation, and pattern formation; pigment chemistry and biophysics; melanoma including clinical, experimental, and comparative aspects; and biochemistry including enzymology and metabolism.

SUBSCRIPTION RATES: Volume 2, 1989, Six Issues: \$150.00 U.S.; \$174.00 elsewhere. Members of the European Society for Pigment Cell Research, the International Pigment Cell Society, and the Japanese Society for Pigment Cell Research may subscribe at reduced rates. Please contact your society for details. Subscriptions outside North America will be sent by air. Payment must be made in U.S. dollars drawn on a U.S. bank. Make all checks payable to Alan R. Liss, Inc.

Modern Cell Biology

Birgit H. Satir, Series Editor

Modern Cell Biology provides investigators in cellular and molecular biology with in-depth articles on topics of current interest.

Titles in the Series

Volume 7: *Gap Junctions* • Elliot L. Hertzberg and Ross G. Johnson, Editors • *Proceedings of the International Conference on Gap Junctions Held at Pacific Grove, California, July 6-10, 1987* • ISBN 0-8451-3306-3 • LC 88-12636 • Publication: July 1988 • 566 pages, \$96.00

Volume 6 • Birgit H. Satir, Editor • ISBN 0-8451-3305-5 • ISSN 0745-3000 • Publication: December 1987 • 164 pages, \$39.50

Volume 5: *Molecular Mechanisms in the Regulation of Cell Behavior* • Charity Weymouth, Editor • *Proceedings of the Fourth Decennial Review Conference of the Tissue Culture Association held at Hershey, Pennsylvania, September 22-26, 1986* • ISBN 0-8451-3304-7 • ISSN 0745-3000 • LC 87-3584 • Publication: June 1987 • 358 pages, \$49.50

Volume 4 • Birgit H. Satir, Editor • ISBN 0-8451-3303-9 • ISSN 0745-3000 • Publication: December 1985 • 242 pages, \$36.00

Volume 3 • Birgit H. Satir, Editor • ISBN 0-8451-3302-0 • ISSN 0745-3000 • Publication: September 1984 • 326 pages, \$49.00

Volume 2: *Spatial Organization of Eukaryotic Cells* • J. Richard McIntosh, Editor • *Proceedings of a Symposium Held in Honor of Keith R. Porter, April 30-May 2, 1982, Boulder, Colorado* • ISBN 0-8451-3301-2 • ISSN 0745-3000 • Publication: April 1983 • 600 pages, \$50.00

Volume 1 • Birgit H. Satir, Editor • ISBN 0-8451-3300-4 • ISSN 0745-3000 • Publication: March 1983 • 216 pages, \$34.00

The Global Impact of AIDS

Alan F. Fleming, Manuel Carballo, David W. FitzSimons, Michael R. Bailey, and Jonathan Mann, Editors

The Global Impact of AIDS presents the insights of an international group of experts from various disciplines, representing both government and non-government organizations, who offer a wealth of observations, anecdotal reports, scientific findings, and recommendations for predicting, controlling, and ameliorating the global impact of AIDS. The text scrutinizes all aspects of AIDS control, from biomedical to behavioral to legal means.

Proceedings of the First International Conference on the Global Impact of AIDS. Co-sponsored by the World Health Organization and the London School of Hygiene and Tropical Medicine. Held in London, March 8-10, 1988 • Hardcover Edition ISBN 0-8451-4270-4 • Softcover Edition ISBN 0-8451-4271-2 • LC 88-8277 • Publication: October 1988 • 460 pages • Hardcover Edition, \$69.50 • Softcover Edition, \$29.50

DNA and Protein Engineering Techniques

Volume 2, 1989 • Six Issues

Dale L. Oxender, Editor

DNA and Protein Engineering Techniques, a new bimonthly newsletter from Alan R. Liss, Inc., provides a rapid exchange of information on the latest experimental methods in molecular genetics and protein engineering. *DNA and Protein Engineering Techniques* features step-by-step experimental protocols. This newsletter's format and clarity makes it a valuable tool at the laboratory bench.

SUBSCRIPTION RATES: *DNA and Protein Engineering Techniques*, Volume 2, 1989, Six Issues: \$60.00. A special rate of \$30.00 is available to students and post-doctorates whose institutions/laboratory have a subscription. A newsletter binder is available at \$9.95. For all subscriptions outside the U.S. please add \$6.00 postage.

Linking two rapidly advancing fields....

DNA Replication and Mutagenesis

Edited by **Robb E. Moses**, *Department of Cell Biology, Baylor College of Medicine, Houston, Texas*, and **William C. Summers**, *Department of Therapeutic Radiology, Yale University School of Medicine, New Haven, Connecticut*

DNA Replication and Mutagenesis contains current approaches for studying the role of DNA replication in mutagenesis. Biochemical and genetic analyses are described for both procaryotes and eucaryotes. Most mutagenesis appears to be the result of functions occurring during DNA replication. The purpose of this book is to review recent investigations of these functions and the contribution of each of them to mutagenesis of the genome.

This book will interest researchers in molecular biology and genetics, biochemistry, nucleic acid enzymology, and toxicology and pharmacology, as well as graduate students in the biological sciences or in advanced medical school programs. Based on an ASM conference held in November 1987, on Marco Island, Florida.

Below are the condensed contents of this book. To order, contact the ASM Publication Sales Office.

CONDENSED CONTENTS

PART I: Enzymology of DNA Replication (7 chapters). **PART II: DNA Replication Systems** (12 chapters). **PART III: Mechanisms of Misincorporation** (8 chapters). **PART IV: Bypass Synthesis** (8 chapters). **PART V: Genetic Control of Mutagenesis** (5 chapters). **PART VI: Damage-Directed Mutagenesis** (9 chapters). **PART VII: Induced Mutagenesis** (4 chapters).

Publication date: August 1988.
Approximately 520 pages, illustrated, index.
Hardcover (ISBN 1-55581-003-9).

A definitive work focusing on
homologous recombination . . .

Genetic Recombination

Edited by
Raju S. Kucherlapati,
*University of Illinois College
of Medicine, Chicago, Illinois*, and
Gerald R. Smith, *Fred Hutchinson
Cancer Research Center, Seattle, Washington*

Genetic Recombination presents molecular, biochemical, and biological perspectives on recombination, especially homologous recombination, as well as site-specific recombination and so-called illegitimate recombination (in which integration of DNA sequences is achieved without apparent regard to sequence or position homology). The process of recombination is described for bacteria and bacteriophage, yeasts, *Drosophila*, and cultured mammalian cells. Several chapters also deal with the biological consequences of genetic recombination including recombinational control of gene expression and production of chromosomal abnormalities leading to malignancy and birth defects.

This well-integrated treatise will be of interest and value to researchers and students focusing on procaryotic and eucaryotic genetic recombination and on related topics such as gene expression, protein-DNA interactions, chromosome mechanics, meiosis, gene therapy, and DNA repair.

To order *Genetic Recombination*, contact the **Publication Sales Office, American Society for Microbiology, 1913 I Street, N.W., Washington, DC 20006**.

A landmark in scientific publishing

ESCHERICHIA COLI AND SALMONELLA TYPHIMURIUM

CELLULAR AND MOLECULAR BIOLOGY

Editor in Chief: Frederick C. Neidhardt

Editors: John L. Ingraham, K. Brooks Low, Boris Magasanik, Moselio Schaechter, and H. Edwin Umbarger

From the Review in Nature:

"The objective of these two volumes, in the words of the editors, is to provide for the first time a comprehensive treatment of the molecular and cellular biology of *Escherichia coli* and *Salmonella typhimurium* that would be a logical first resource for anyone seeking information about these organisms. With few reservations we think that this objective has been achieved, and achieved at a price for the flexicover edition that makes the books an exceptional bargain.

The two volumes are divided into six parts, with a total of 104 chapters written by about 150 authors who are recognized authorities. The total number of literature citations must be nearly 20,000. Despite these encyclopaedic dimensions and its multi-author make-up, the treatise is remarkably free from the overlap and the imbalance that frequently mars this kind of enterprise. It

is equally pleasing to be able to report that the majority of authors have succeeded in writing what their editors required of them: "thoughtful and narrative reviews" as opposed to mere compilations of data and references. . . . Overall we and other colleagues are very impressed by these books. . . . The editors have obviously put a lot of effort into this enterprise and played an effective disciplinary role in maintaining breadth without overlap, and a uniform style. There is nothing comparable available on the market and everyone working with, or teaching about, *E. coli* and *S. typhimurium* will find these books to be invaluable. Final year undergraduates and postgraduate students will also find them an excellent resource."

B. M. Wilkins and R. H. Pritchard, *Nature*

Announcing a new section on Viral and Cellular Oncogenes!

Journal of Virology

Editor in Chief
Arnold J. Levine

Editors

Bernard N. Fields

Peter M. Howley

Robert A. Lamb

Michael B. A. Oldstone

Thomas E. Shenk

Anna Marie Skalka

George F. Vande Woude

Leading the way in molecular and cellular biological research, the *Journal of Virology* publishes fundamental new information concerning the viruses of bacteria, plants, and animals. These reports of original research use the approaches of biochemistry, biophysics, cell biology, genetics, immunology, molecular biology, morphology, physiology, and pathogenesis and immunity. Going well beyond merely cataloging new data, the articles contain experimental observations that address a hypothesis, lead to new concepts, and indicate new directions in research.

The *Journal* specifically encourages publications relating viruses under study to their host cells or organ-

isms. Journal sections include "Viral and Cellular Oncogenes," "Viral Pathogenesis and Immunity," "Virus-Cell Interactions," "Animal Viruses," "Bacterial Viruses," and "Plant Viruses."

Because viruses have become vital tools for studying life processes at the cellular and subcellular levels, molecular and cellular biologists, as well as virologists, should strongly consider a subscription to the *Journal of Virology*.

For immediate access to the most timely and important developments in virus research, complete the coupon below and return it to ASM.

Monthly 4-700 pages in 1989 ISSN 0022-538X

**New introductory text!
MOLECULAR
ENDOCRINOLOGY**

Franklyn E. Bolander

This is the first textbook on the major molecular mechanisms of hormone actions. Written for beginning graduate students, **Molecular Endocrinology** will also be a useful reference for professionals in related fields. The text provides a solid background in the basics of molecular endocrinology and concentrates on the molecular aspects of hormone function. Also included are useful techniques and discussions of their advantages, disadvantages, and applicability.

CONTENTS: Introduction. General Endocrinology. Kinetics. Nuclear Receptors. Membrane Receptors. Receptor Regulation. Cyclic Nucleotides. Calcium, Calmodulin, and Phospholipids. Miscellaneous Second Messengers. Non-transcriptional Effects of Hormones. Transcriptional Regulation. Histone and Nonhistone Protein Modifications. Post-transcriptional Control. Molecular Evolution of the Endocrine Systems. Hormones and Oncogenes. Molecular Bases of Endocrinopathies.

April 1989, 279 pages,
\$39.50 (tentative)
ISBN: 0-12-111230-6

**THE CHLAMYDOMONAS
SOURCEBOOK
A Comprehensive Guide
to Biology and
Laboratory Use**

Elizabeth H. Harris

This book reviews both past and current research using *Chlamydomonas* in all the major fields in

which it has been important as a model system. In addition to summarizing the published literature, the author has included a significant quantity of previously unpublished data and genetic analysis. All research workers who use *Chlamydomonas* as a model experimental system will find that this volume belongs on the lab bench.

CONTENTS: An Overview of the Genus *Chlamydomonas*. Culture and Storage Methods. Cell Architecture and Division. The Sexual Cycle. Motility. Metabolism. Photosynthesis. Organelle Heredity. Nucleic Acids and Protein Synthesis. Genetic Analysis. Mutant Strains. Procedures and Resources. Index.

February 1989, c. 802 pages,
\$145.00/ISBN: 0-12-326880-X

**ION TRANSPORT IN
PROKARYOTES**

edited by
**Barry P. Rosen and
Simon D. Silver**

CONTENTS: **Cation Transport Systems:** Proton Transport and Proton-Motive Force in Prokaryotic Cells. Potassium Transport in Bacteria. Bacterial Sodium Transport: Bioenergetic Functions of Sodium Ions. Bacterial Magnesium, Manganese, and Zinc Transport. Calcium Transport in Prokaryotes. **Anion Transport Systems:** Phosphate Transport in Prokaryotes. Chloride, Nitrate, and Sulfate Transport in Bacteria. Transport of Organic Acids in Prokaryotes. **Plasmid-Encoded Transport Systems:** Plasmid-Encoded Ion Transport Systems. Each chapter includes references. Index.
