

CELL GROWTH & DIFFERENTIATION

The Molecular Biology Journal of the
American Association for Cancer Research

A NEW monthly journal devoted to
the rapid publication of trend-setting research
in the dynamic field of molecular biology

SCOPE

Original *in vitro* and *in vivo* studies of mechanisms underlying normal and abnormal cell behavior and cell growth control

- Characterization of genes, their products, properties, and functional role in cell proliferation and differentiation
- Gene expression and activation
- Transcriptional regulation
- Cell responses from mitogenic stimulation through mitotic phosphorylation and cell division

Research Capsules: updates of changing concepts in the field

Viewpoints section: write-in dialogue concerning published articles

A DISTINGUISHED EDITORIAL BOARD

George F. Vande Woude, Ph.D.

Editor-in-Chief

CALL FOR PAPERS

- Rapid peer review expedited by FAX transmission and overnight mail service
- Publication within 10 weeks of acceptance once initial January 1990 issue appears

Mail manuscripts to Editorial Board member of your choice. For further details about manuscript submission, contact Dr. George F. Vande Woude, Editor-in-Chief, 301-698-1584, or the American Association for Cancer Research (AACR), 215-440-9300; FAX 215-440-9313.

SUBSCRIPTION INFORMATION

Molecular Aspects of Picornavirus Infection and Detection

Edited by **Bert L. Semler**, University of California, Irvine, and
Ellie Ehrenfeld, University of Utah Medical School, Salt Lake City

In the past two years, giant strides have been made in our knowledge of the molecular biology and structure of picornaviruses. The complete three-dimensional structures of rhinovirus and poliovirus have now been solved through X-ray crystallographic studies, yielding much important information about the antigenic regions of viral proteins and the relationship of viral structure to antibody accessibility, with important implications for vaccine design. These three-dimensional structures have provided new insight into the mechanism of action of several antiviral compounds.

This very timely book presents our current understanding of the biology of these viruses in the context of clinical implications. Virologists, molecular biologists, and clinical researchers will all find this book useful and interesting reading. Based on the 1988 ICN-UCI International Conference on Virology, Newport Beach, Calif.

CONTENTS

I. Molecular Biology of Viral Replication: Use of Mutagenesis Cartridges in Molecular Genetic Analyses of Poliovirus (Bradley et al.); Replication of Hepatitis A Virus (Ticehurst et al.); Comparison of Encephalomyocarditis Virus and Poliovirus Translation Initiation and Processing In Vitro (Jackson); Molecular Biology and Genetics of Poliovirus Protein Processing (Dewalt and Semler); Poliovirus RNA Polymerase Expressed in *E. coli* (Ehrenfeld and Richards); A Large Segment of Poliovirus 5'

Noncoding Region Allows Cap-Independent Translation of Downstream Sequences in Mammalian Cells (Trono et al.)

II. Virion Structure and Cell Surface Interactions: Structural Basis for Serotypic Differences and Thermostability in Poliovirus (Hogle et al.); Conformational Adaptations by Picornaviruses to Antiviral Agents and pH Changes (Rossmann); Neutralization of Picornaviruses (Mosser et al.); Molecular and Biochemical Aspects of Human Rhinovirus Attachment to Cellular Receptors (Colonno et al.); Towards a Molecular Vaccine for Foot-and-Mouth Disease (Brown); Antigenic Structure of Hepatitis A Virus (Lemon and Ping)

III. Genetic Determinants of Viral Disease and Applications to Diagnosis: Sequence Alignments of Picornaviral Capsid Proteins (Palmenberg); Human Enterovirus Infections (Rotbart); Modification of Six Amino Acids in the VP1 Capsid Protein of Poliovirus Type 1, Mahoney Strain (Girard et al.); Genetic Analysis of Neurovirulence, Using a Mouse Model for Poliomyelitis (Racaniello et al.); Expression of the Attenuation Phenotype of Poliovirus Type 1 (Nomoto et al.); Attenuation and Reversion of the Sabin Type 3 Vaccine Strain (Minor et al.)

Hardcover (ISBN 1-55581-009-8)
Publication date: March 1989
Member: \$45.00; Nonmember: \$59.00
335 pages, illustrated, color plates, index

For the past eight decades The Rockefeller University Press has been publishing timely and significant research in the biomedical sciences. Each month the Press' five journals include leading papers in their respective fields. Shouldn't you be subscribing to these influential journals?

Biophysical Journal

Theoretical and experimental developments in biophysical research. Journal of the Biophysical Society, edited in cooperation with the Division of Biological Physics of the American Physical Society. Monthly. \$420 (Europe \$446). T. E. Thompson, editor.

The Journal Of Cell Biology

Contemporary cell biology from the international community. Edited in cooperation with the American Society for Cell Biology. Monthly. \$320 (Europe \$376). N. B. Gilula, editor.

The Journal Of Clinical Investigation

Research linking basic science to clinical practice, including summaries of emerging avenues of investigation. Journal of the American Society for Clinical Investigation. Monthly. \$225; Personal \$130* (Europe add \$50). B. F. Scharschmidt, editor.

The Journal Of Experimental Medicine

Significant research in immunology and experimental medicine. Monthly. \$160 (Europe \$204). A. Cerami, Z. Cohn, M. McCarty, C. Nathan, R. Steinman, editors.

The Journal Of General Physiology

Concerned with mechanisms of broad physiological significance, covering prime research for cellular and molecular physiology. Official journal of the Society of General Physiology. Monthly. \$140 (Europe \$166). P. F. Craneffeld, editor.
